

COPPER DEVICE HANDLING AND MAINTENANCE REMINDER

- 1.** Be careful when installing the copper device. To prevent copper from getting dirty, we strongly recommend the use of gloves when installing.
- 2.** When installing the device, remove the stone box protective film last (after the device is in place, the stones are stacked and the electrical part is connected).
- 3.** When removing the film from the stone box, avoid touching the copper part with bare hands. This can leave fingerprints on the stone box, which will darken over time.
- 4.** When cleaning the device, avoid cleaning agents that contain large abrasives, ammonia, bleach and alcohol.
- 5.** When cleaning the copper stone box, avoid rough cloths. We recommend using a soft sponge and cloth.
- 6.** We recommend SANO Multi Metal Non Abrasive Cleaner. Other cleaning agents specially designed for cleaning copper are also suitable.
- 7.** The copper stone box may change color (darken) over time.
